

CROSS-Q

A QUADRI SOVRAPPOSTI / AVEC CARRES SUPERPOSES / WITH OVERLAPPING SQUARES

Tubi rettangolari di grandi dimensioni, diversamente assiemati, portano a CROSS-Q.

Angoli retti, rigide forme geometriche di quadri e rettangoli, si sovrappongono componendo variamente un calorifero innovativo.

Des tubes rectangulaires de grandes dimensions, assemblés différemment, pour arriver à CROSS-Q. Des angles droits, des formes géométriques rigides de carrés et de rectangles, se superposent composant ainsi différemment un radiateur innovant.

design Luigi Brebbia

Large, variously assembled, rectangular tubes are used to produce CROSS-Q.

Innovative radiators thanks to 90° corners and strong geometric shapes (squares and rectangles) sitting on top of each other.
