**NEXTILE**<sup>®</sup>  
THE SLAB

**Nextile** – The Slab is the modern age covering solution, which Varmora believes will revolutionize the tile industry forever. Leaps & bounds ahead of its peers, leaving behind a legacy of creativity and innovation, Nextile strives to be the exclusive choice of people who appreciate artistic ingenuity.

Varmora always ensures that its products are technically superior and future-proof. The complete focus while developing Nextile was on producing a slab that showcases the future in the present era. Nextile is the initiator of next-gen décor trends, with its effective ergonomics and enhanced functionality.

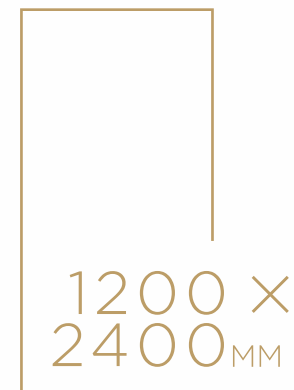

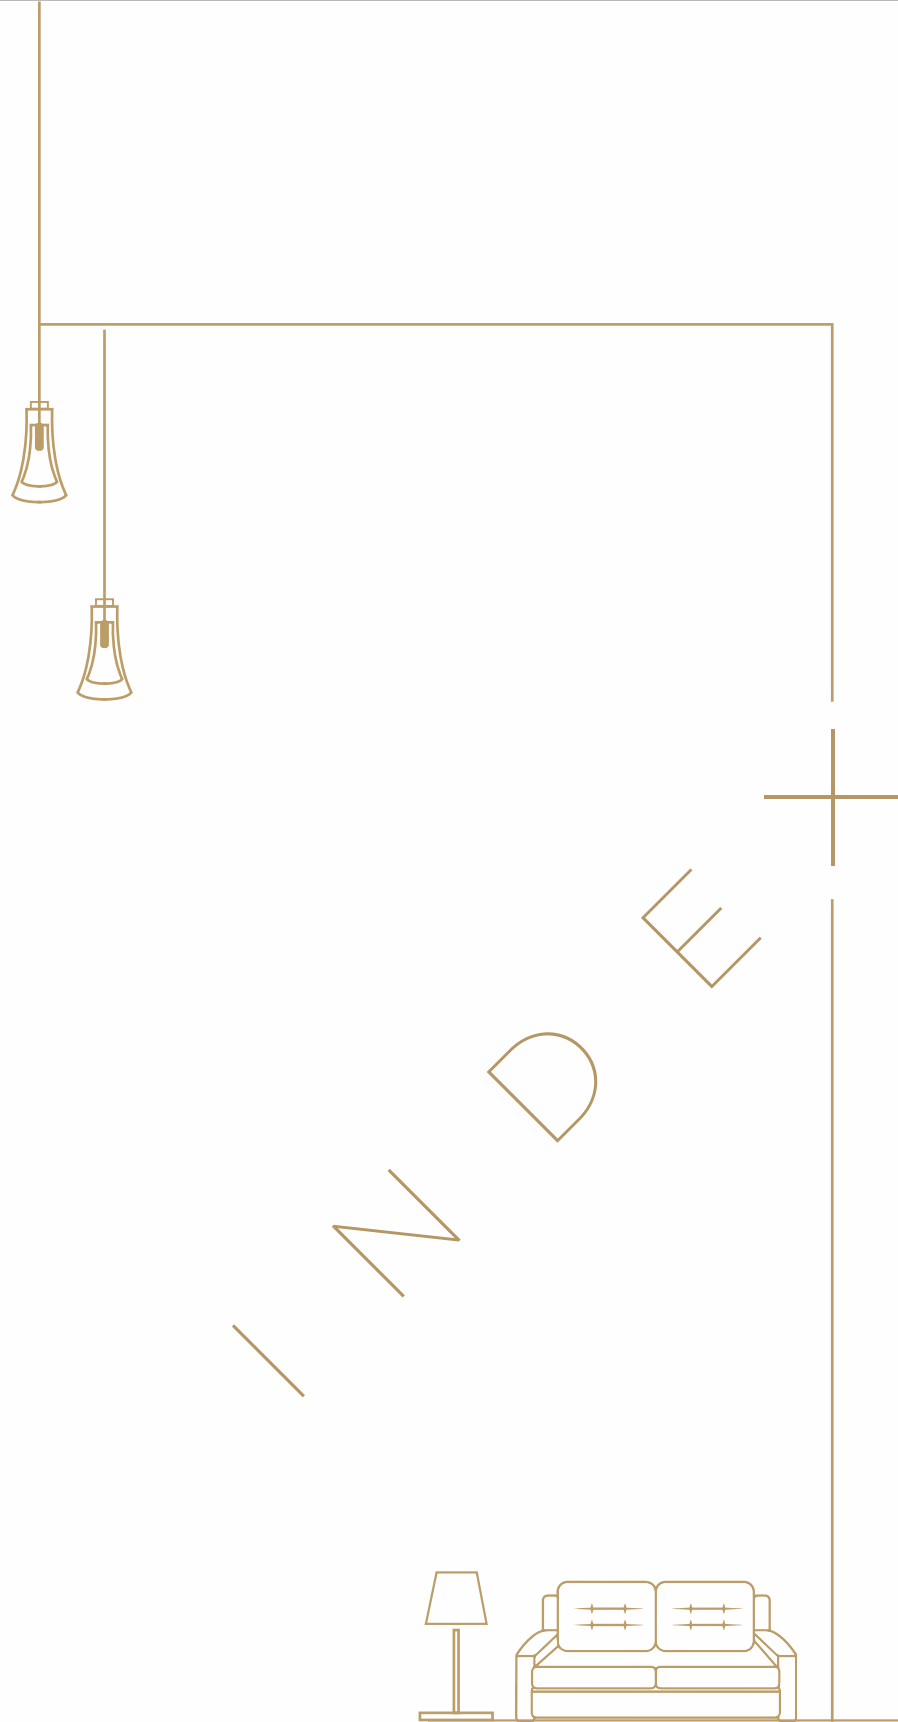

Nextile opens the door to a gamut of application possibilities. The functional sizes of Nextile make it an exquisite offering that can be embellished in places like the kitchen, bathroom & facades.

The technological prowess of Varmora is clearly exhibited by the fact that Nextile is also ideal for furniture covering requirements.

## FLEXIBILITY

Nextile – The Slab is a modern range of flexible body slabs. The natural texture and color of Nextile comes from the soft clay material used to manufacture it. Nextile ensures best raw materials are used to enhance the finish and beauty of the slab. Nextile's flexible body slabs are crack-free and can be given a bent to an extent as per the requirement because of its high flexibility. These slabs are also extremely lightweight and soft unlike the traditional offerings in the market.

**Color body** has distinct feature of the upper surface and the body of identical shade while in **Normal body**, in the furniture making process, during cutting tiles, the surface above is particularly matched with the color of the body and specific care is taken that the shades do not differ.

## SURFACE FINISHING

With attention to detail given to every aspect of Nextile, each and every surface finish is also selected after careful deliberation with industry experts to ensure better proficiency. Nextile comes in a total of nine elegant finishes that are bound to inject an element of luxury into décors.

## The new age porcelain slabs

Nextile can be called as the modern-day avatar of ceramic distinction as it has enduring pieces of class and potency. Be it a contemporary space or a classic one, it can do justice to any without any struggle. It is sure to spoil you for choice as it has a wide variety in terms of colors, sizes, and aesthetics. It can cover your walls with grace, your floor with glory and, your ambiance with excellence. Technical accuracy has always been our forte and this time around the same is very well blended by us in our architecture collection that has serene designs and subtle hues; which allows multiple applications including indoor coverings and as well as facades.

-  Kitchen / Bathroom
-  Wellness / Hospitality
-  Indoor / Outdoor furniture
-  Wall Cladding

	Highly non-porous		Resistant to detergents
	Easy to clean and maintain		Resistant to chemicals
	Suitable for contact with food		Friction coefficient
	Water resistant (water absorption 0.1% average value)		Coefficient of Linear Thermal-Expansion
	Dimensional stability		Resistant to humidity
	Suitable for indoor and outdoor applications		Colour resistant to light
	Fire resistant		Deep abrasions resistant
	Resistant to mould and fungi		Stain resistant

### WALL & FLOOR

---

Nextile is one of the most reliant options for wall & floor applications. It has a solid and sturdy body that can handle everyday wear and tear without losing inherent charm and warmth.

### BATHROOM

---

Nextile can do complete justice to bathroom application. The compact, non-porous, abrasion, slip and water resistant Nextile has soothing designs that can give bathrooms a tranquil look.

### KITCHENS

---

Nextile can complement the sink application as well as it is moisture resistant and do not require heavy maintenance. It is durable and easy to clean. Since the tile is digitally printed, it can stand the test of time efficiently.

### FURNITURE

---

Nextile can give any furniture a touch of exclusivity. It can take the shape of your décor and also last long. Tiles are easy to clean and resistant to stains and scratch as well.

### FACADES

---

Nextile is ideal for façade application also. It can give a solid covering to the buildings and also demand minimal maintenance. It is all weather-friendly and is resistant to grime.

## CUTTING AND HANDLING INSTRUCTIONS

### Cutting Holes in Full Body Tiles

Ensure that at least 5 mm space is left between the edge of the slab and the point where the hole has to be made. The radius of the corners must be a minimum of 3 mm.

Angles cut without necessary radius length create a stress point, whereas the large radius maintains the structural resistance. Make sure to never leave the corners with 90 angle cuts.

Use a drill bit smaller than 3 mm to drill corners of the cut-out.

Use a bridge saw running to cut from one hole to the next. Ensure the bridge saw is running at minimum speed to decrease the stress on the slab.

## INSTALLATION SUGGESTIONS

### Processing Stages:

#### Step 1: Prepare the Surface

The laying process of Nextile is similar to the laying process of traditional tiles and slabs. The laying process of Nextile requires an adhesive to be applied on the back of the slab and the setting bed. The surface should be flat and clean without any dust particles, scraps or cement residue on it. Any cracks or uneven area of the surface must be filled with leveling compounds.

#### Step 2: Begin Your Layout

Measure all the walls in the room and find the center point of the room. Start laying a loose row of tiles on the surface, laying tiles from different batches together. Measure the space left uncovered on the edge of the wall and cut tiles accordingly to fill the space.

#### Step 3: Apply the Adhesive

The surface to be covered should be flat, solid and free from dust, oil or grease. Mix the adhesive as mentioned on the technical data sheet of the chosen adhesive. Use a round toothed trowel to spread the adhesive on the surface to be covered. Spread the adhesive across an area, which is 5-10 cm larger than the size of the slab. Hold the slab in a vertical position with a handling frame and apply the adhesive on the back of the slab with a square toothed trowel.

#### Step 4: Cut Tile as Needed

Always start by measuring the tile and carefully marking cuts to be made on the surface. We recommend using a tile cutter to make straight or diagonal pinpoint cuts. For longer, full-length curved cuts, a rod saw should be used. After making the necessary cuts, use a carborundum stone to smooth out the sharp edges.

#### Step 5: Set Your Tile

Use suction cups to horizontally lay the slab on the surface and avoid sliding the slab in its place. We recommend laying the perimeter slabs last and leave a 1/4th inch gap between the slab and wall. And keep placing spacers between each tile as you move forward. Without exceeding the breaking point, carefully insert a wedge into the support. Use of adjustable pliers is advised for easier placement of the wedges.

After laying the slabs, a non-bounce plastic mallet should be used to ensure uniform bonding. Gently tap the surface of the slab, moving from the middle to the edges to remove any air pockets.

#### Step 6: Grouting Joints

After the adhesive has dried, tap your foot on the protruding part of the wedge in line with the joint to remove the support. Carefully choose a joint sealant, which has a matching color shade to the slab. Pay attention to the technical sheets and check the cleaning time as some of the colored sealants contain strong pigments and additives.

Use a grout float or squeegee to force the grout mixture down the joints and remove the excess grout from the surface. Use a damp sponge to clean the grout residue from the surface and smooth out the joints.

## CLEANING & MAINTENANCE

### INTRODUCTION:

Varmora's Nextile is easy to clean and maintain. Regular cleaning and maintenance of the slab accentuates the aesthetics and gives the surface an appealing shine.

### INITIAL CLEANING:

It is to be noted that the initial cleaning done after laying the floor is extremely important. The initial cleaning helps in removing any residue of mortar, adhesives and epoxy that may be left in the joints. We recommend using an acid-based detergent in 1:5 ratio with water. Rub this solution on the surface energetically to clean the surface properly. Next, it is equally important to rinse the surface thoroughly with water to remove traces of the detergent used.

### MAINTENANCE AND CARE:

As Nextile is manufactured under high firing temperature and the use of high-quality raw materials makes it waterproof. Minimum absorption rate doesn't allow dirt to penetrate the surface, but it is necessary to clean it from the surface. We do not recommend using detergents containing waxes for cleaning the surface, as it may form an unwanted greasy layer on the surface. The appropriate choice of detergent has been mentioned in the following points. Especially after the installation of polished surfaces, we recommend covering the surface with particle board or any other suitable material to protect it from dirt and on-site processing.

### GENERAL RECOMMENDATIONS:

For the slabs laid in heavy footfall areas like airports, shopping malls and public spaces, we recommend using automatic cleaning machines with suction. These machines ensure deep cleaning of the surface while removing liquids that may cause soiling and subsequently prevents the formation of any unwanted layers on the surface. Any readily available detergent can be used to clean Nextile, except Hydrofluoric acid or its compounds. Always keep the concentration of the detergent as low as possible to speed up the maintenance process and keep the costs in check. We recommend using large sized, bright or polished surfaces for raised floors. These surfaces can be easily dry cleaned or it requires fewer amounts of liquids. Once, the floor has been laid, it is essential to clean it properly with the necessary products.

### MATT MATERIALS:

For Matt finishes, after following the steps in the Initial Cleaning section, the surface only needs to be cleaned with hot water mixed with an alkaline detergent in a 1:200 concentration. It is not recommended to apply a waterproofing product on Matt surfaces. As Matt finishes have zero porosity, the waterproofing agent deposits on the surface unevenly, this ruins the aesthetic appearance of the slab.
