

Universal cistern

Elegant interface for WC

The floor-mounted LAUFEN Universal cistern is characterised by its rectangular geometric design and its high functionality. Its simple cuboid shape can be unobtrusively integrated into the spatial geometry of the bathroom, elegantly disguising the sanitary technology for the WC – the water connection, cistern and outlet are all fully hidden inside the ceramic housing. The minimalist design fully harmonises with the wide range of floor-mounted WCs offered by LAUFEN.

However, the Universal cistern not only has optical advantages. As an interface between the WC and the water supply and drainage installations, it also contains all standard connection options. It is thus eminently suitable for new constructions, renovation projects and bathroom conversions. Under normal circumstances, installation will not require any structural changes or interventions.

When installed by an expert, the WC will be back in operation within the shortest possible time – a customer-friendly solution when the conversion has to take place under normal operating

circumstances; a real alternative to conventional surface-mounted or concealed solutions.

When it comes to cleanliness and hygiene, the robust ceramic housing of the Universal cistern has many bathroom advantages.

The ceramic surface has no joints or recesses where dirt can collect. A moist cleaning cloth is usually sufficient for quick and easy cleaning of the smooth surface.

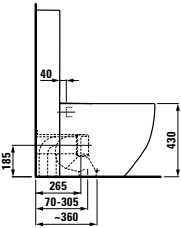

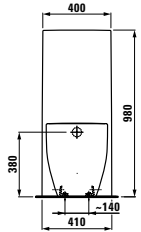

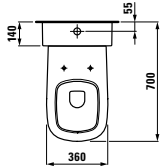

The LAUFEN Universal cistern is available with the dimensions 14x40x98 cm (DxWxH). The cistern and internal flushing mechanism make use of durable, water-saving Geberit technology. The flush mechanism is triggered by a two-volume flush button, which can be set to release water volumes of 6/3 litres or 4.5/3 litres. The Universal cistern fulfils the required standards for the USA (ASME A112.19.2 and A112.19.14), Australia (AS1172.2), Europe (EN14055 Class 1/Class 2) and Switzerland (592014-1).
