

Solid surface bathtubs and shower trays

Bathing in a bathtub made of solid surface material feels like being in a natural basin. Due to a high percentage of mineral particles from nature, the surface feels smooth, like a rock which has been rounded and polished over years by gentle flowing water. The pleasant, warm touch of the surface gives a feeling of healthiness and cleanliness – and caters for maximum relaxation.

The innovative material also allows for an incredible freedom of design: almost every shape is feasible – from very organic, following nature's example, to very straight and architectural. Bathtubs made of solid surface are true design objects in every kind of bathroom.

Furthermore the non-porous surface of the material is hygienic, durable, UV-resistant, highly resistant to scratches and can be effortlessly cleaned – and therefore provides public buildings and private households with a long-lasting product, that is easy to maintain. Thanks to the characteristics of the material even small damages, like stains or scratches for example, can be cleaned easily or repaired invisibly. And of course, the solid surface material is non-toxic, which is essential for a material that handles water, our most valuable resource.
