

Whirl systems

Wellness at home: LAUFEN combines the rejuvenating energy of water, air and underwater lighting for reviving massages in your own bathtub at home. A feast for the senses – in total privacy. Underwater massage combines the life-giving power

of water and air to lift your feeling of wellbeing. This is what LAUFEN promises to deliver with its top-quality bathtubs. LAUFEN whirl systems are available for all acrylic and solid surface bathtubs.

The unique LAUFEN air massage system, which features up to 90 air nozzles in the base of your bathtub, is exceptionally effective and comfortable. Thanks to the large number of apertures, the entire body is massaged evenly with ozone treated warm air which enters the water through air conduits under the floor of the tub. There are no metal nozzles which project beyond the base of the tub. The intensity of the air massage can be controlled seamlessly up to 100%. The air massage system is self-drying and therefore extremely hygienic and easy to maintain.

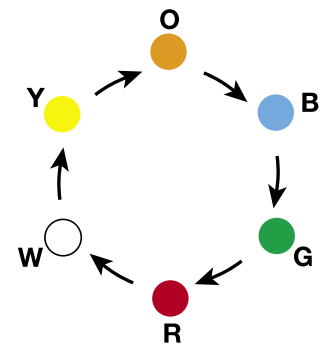

Unlike the air massage system, the water massage system uses water jets to achieve the desired massage effects. Depending on the model, your bath may feature between 10 and 14 massage water nozzles. There are water nozzles at the sides of the bathtub. To adjust the direction simply move the nozzle manually. Generally, it is not recommended to direct the nozzles perpendicular to the body but rather at a slight angle. The intensity of the water massage can be adjusted via the electronic control. To increase or decrease the diameter of the water jet simply turn the inner part of the jet clockwise or anti-clockwise.

Rotary micronozzles are installed in the back and foot areas of the bathtub and can be varied manually in intensity by turning the inner part of the nozzles. For more comfort these very flat nozzles pamper you with a relaxing feeling and soft massage.

Whirl systems

Coloured lighting appeals to all senses. LAUFEN offers two different types of lighting: either underwater LED lamps illuminate the water or a LED strip in the overflow slot (used in Kartell by LAUFEN bathtubs) creates a relaxing atmosphere. Usually the colours of the LED lights change continuously, but one colour can also be selected via the sensor control system or remote control.

The premium whirl systems (.695 .056 .057) feature a highly effective automatic disinfection system. In addition, they are equipped with a water heating system, which keeps your bath water temperature constant while the water massage function is in operation. This function is especially convenient, particularly for keeping the water warmer for longer in larger bathtubs.

Electronic sensor control

	Air massage	Hydromassage	Disinfection	Heating	LED lamps	LED strips in overflow slot	Mist	Display	Music
Option 605	x								
Option 615					x				
Option 616						x			
Option 625	x				x				
Option 627						x	x		
Option 635		x							
Option 645	x	x							
Option 675	x	x			x				
Option 695	x	x	x		x				

The touch sensors for the whirl control system are recessed flush into the rim of the bathtub so they do not detract from the aesthetic appearance of the bathtub. This is not just simple and ingenious, it also enhances safety. Besides it is scratch-resistant, hygienic as well as easy to clean. Simply control your whirl system by softly touching the illuminated symbols on the rim of the bathtub.

Remote control

	Air massage	Hydromassage	Disinfection	Heating	LED lamps	LED strips in overflow slot	Mist	Display	Music
Option 056	x	x	x	x	x			x	x
Option 057	x	x	x	x	x		x	x	x

With the remote control system, LAUFEN ensures additional comfort in its top-of-the-range bathtubs. The waterproof casing of a media player has a sophisticated design and conceals state-of-the-art technology: As well as the whirl system control, the equipment also includes an MP3 player, a radio and an amplifier which is integrated into the tub.

The straightforward user guidance with control buttons and screen gives the user full access to all functions of the whirl system who can, for example, run predefined relaxation programs which combine wellness applications and music, and also create customised programs.

The remote controlled music functions can both be seen and heard: The integrated MP3 player has 2 GB of memory for

favourite tracks, which can be played via headphones or a powerful 4.1 sound system with four 30 watt loudspeakers and a 100 watt subwoofer.

Music can also be played by external devices either wirelessly via a Bluetooth 2.0 connection or via USB cable. A practical function when relaxing in the bath: A quick-selection button provides instant access to your music collection or radio. There is also a new function that controls a chrome-plated, LED-lit outlet, which spreads a mist over the surface of the water. The remote control can swim on the surface of the water and is kept on the rim of the bathtub, where hidden magnets hold it firmly in place.

When ordering whirl systems, LAUFEN always recommends to order bathtubs with acrylic panels or to install removable tiled drywalls for easier access in case of maintenance. If you can't avoid bricking in the bathtub, please plan large inspection chambers of minimum size 50x50 cm so that technical parts remain accessible. The installation of an additional ventilation grill is compulsory.
