

tronic

tronic – electronic operating concept

The tronic electronic operating concept offers an interesting alternative to traditional tap-based control systems which use handles and levers. This innovative concept is based on electronic controls and makes for even more comfort and hygiene. As the operating unit can be placed anywhere, this opens up new aesthetic and ergonomic furnishing solutions for planners and users.

The operating unit is touch-activated.

The water temperature can be set by turning to the left or right, with an LED indicating blue for cold water and red for hot water.

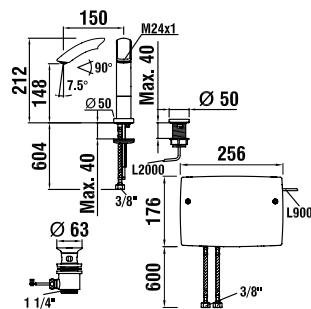

The output can be regulated by simultaneously pushing and turning.
